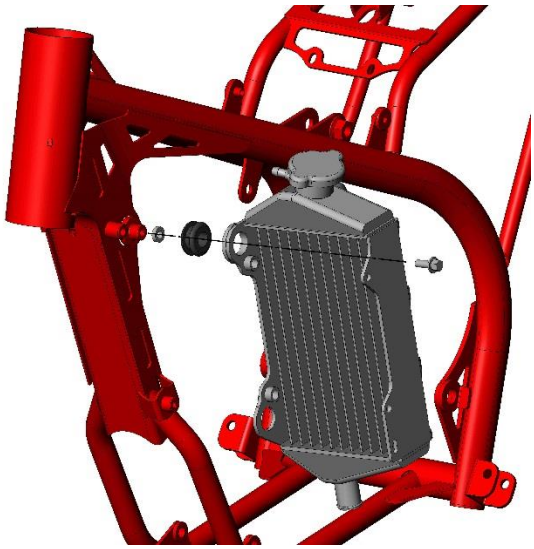
Mounting the 2016 King Radiator on Older King Models

For 2016 the CX50 SR (King) radiator has been strengthened in the area of the upper radiator mount. The part number for this new radiator is FCCS0058.

For customers with older models that order the old part number FCCS0031 will automatically receive the new radiator, new thicker grommet (existing silencer grommet MCMUGR03), a spacer (FCCS0060) and a longer bolt (HCBF0620). This is all combined as a kit FKCS0002.


The spacer can be 'super glued' to the frame as it does not need to come off in the future. Its only purpose is to control the amount of 'crush' on the grommet.
