TSB0210 Clutch Washer Stacks

Cobra has an improved clutch washer design. The new washer stacks have taller springs but are overall shorter and have a single shim.

These new washer stacks are being sorted at the factory by height as well as by force at simulated shoe engagement.

Because of this, we have been able to widen the range of stack heights that provide an acceptable clutch ‘hit’

The stacks in each stack of three will measure within 0.05mm (0.002”).
