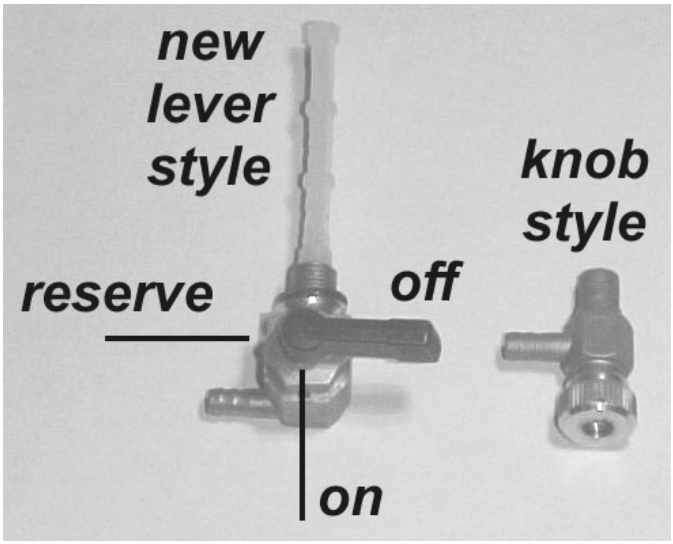
TSB0605: Fuel Petcock for all Cobra

June 29, 2005

The knob style fuel petcock (figure below) is being discontinued by Cobra. It will be replaced on all future units by the lever style shown below (TCMU0000). This lever style, as well as the older lever style, has been approved by the AMA for use in all 2005 MY (Model Year) and older products.


You may notice that the new petcock is similar to the lever style used in 2004 and earlier, however, the new unit may be installed such that the lever cannot easily be bumped in the “on” and “reserve” positions, while the fuel line is routed directly under the tank.
