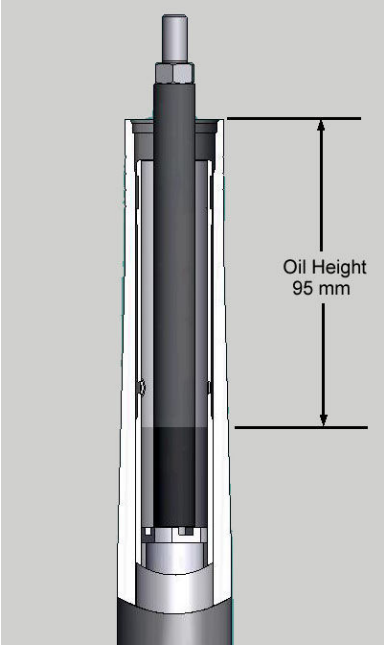
TSB0906: King Fork Cartridge Tube

January 27, 2006

On all 2006 Cobra King models, Cobra Motorcycle Manufacturing is changing the fork cartridge tube from an aluminum tube to a more rigid '5-star' steel tube. This component will be available to the customer at no cost.

Forks with the '5 star' cartridge should be filled with 107cc of quality 7wt fork oil.


NOTE:
For best performance do not use less than 105 cc or more than 110 cc of oil. This equates approximately to a minimum oil height of 90mm and a maximum of 100mm measured as shown below (spring out, rod & tubes collapsed).
