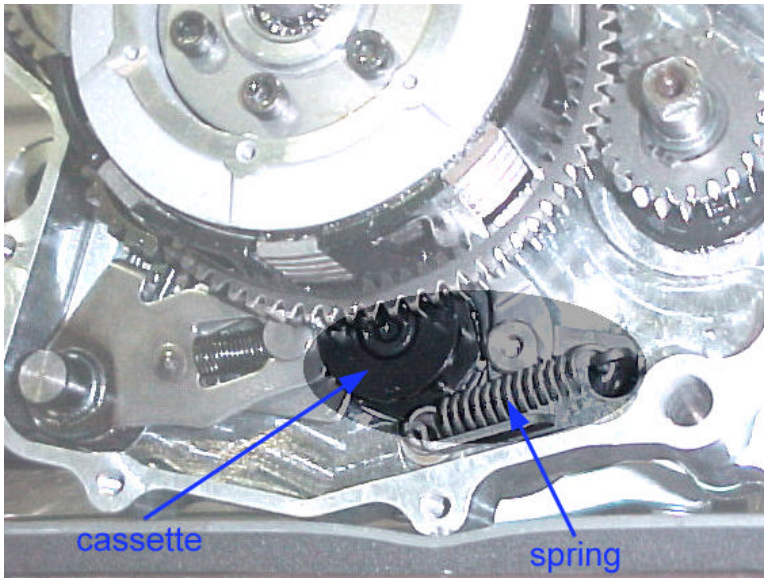
TSB1207: CX65 Shift Cassette & Spring

May 31, 2007

To ensure a smooth shifting, Cobra has upgraded the shift cassette and spring. These parts are available to all Cobra CX65 owners.



All units produced of Revision 1.4 and higher will have this upgraded hardware direct from Cobra. Customers with units produced prior to Rev 1.4 may call into Cobra and arrange an upgrade of cassette and spring. This will require the customer to receive a proper Return Authorization number (RA#) prior to sending in their cassette. It is suggested to retain the lighter spring as some riders prefer the light feel of the original spring.

Call 517 437 9100 x115 to make arrangements with a Cobra customer service representative. Please have serial number and name of dealer available when speaking with the representative.

Ryan Holliday will receive representative samples of cassette and spring for verification purposes.
