TSB1404: 2004 CM rear shock valving

April 8, 2004

Fast, heavy, and or big jumping riders may experience bottoming of the rear suspension and should get the heavy shock valving kit installed in their rear shock to avoid the bending of swingarms and shock brackets.

The kit is Cobra part number SCMUOH09 and should be installed by a trained professional. Cobra recommends sending your shock back to the factory
