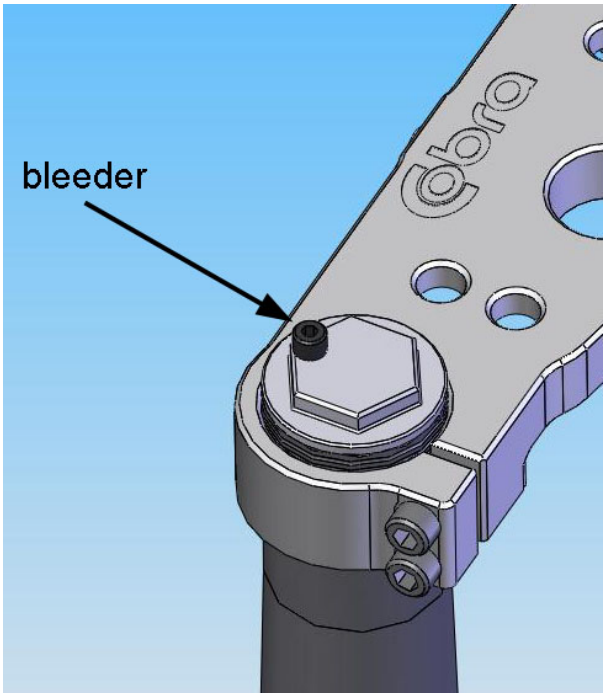
TSB1412 Forks on Cobra Products

April 19, 2012

All of Cobra's motorcycle products (JR, King and CX65) have the highest quality telescoping front fork style suspension with speed sensitive damping available.


For this 'best in class' suspension to work optimally, it is important that the internal pressure be the same as the atmosphere where riding. For this reason, we have installed a tiny bleed screw at the top of each fork cap and one should crack open each bleeder, before every ride, to let the air volume in the forks adapt to local pressure.
