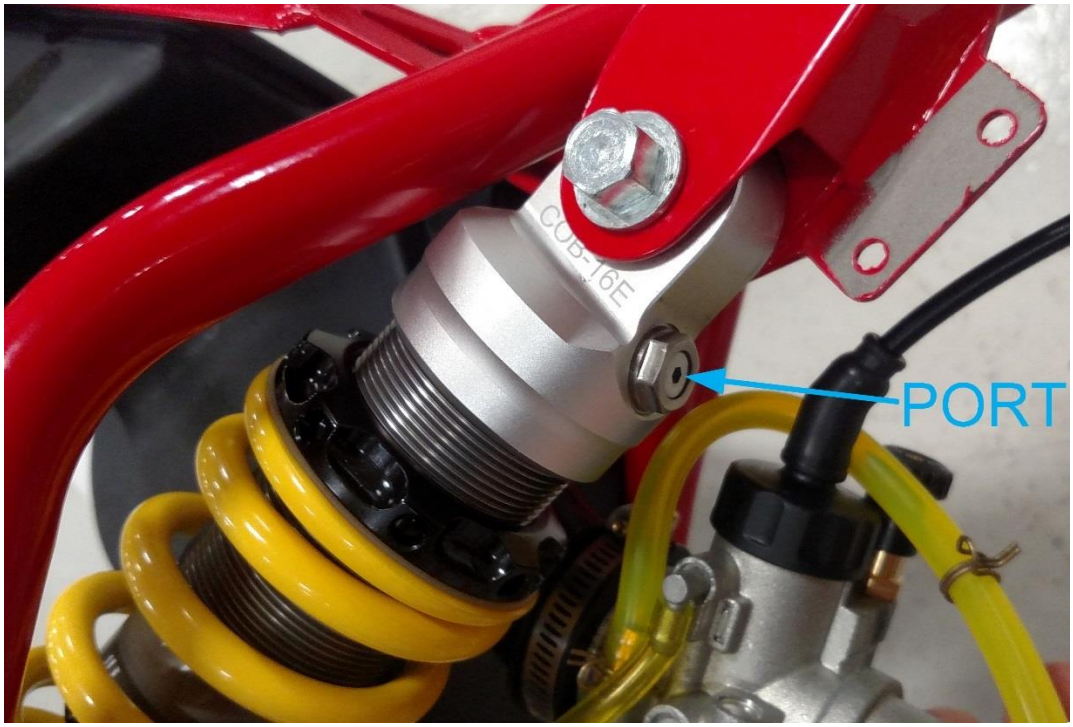
2017 P3 Shock Absorber
TSB1617

2017 CX50 P3 with VIN up through CP35017071 have shock absorbers that could contact the frame in extreme bottoming conditions.

Customers are asked to send their shock back to Cobra for a minor geometry change to the shock body cap.

Upon receiving their shock back, customers will mount the shock onto the bike in a different orientation. New mounting orientation (after the modification to the shock body cap) is show below. This new orientation has the shock body cap in the upper mount with the pressure access port visible toward the engine



CAUTION:
Do not mount your shock in this orientation without first getting the modification done to the shock body cap or damage will occur.
