TSB0925 2025 JR Frame, Pipe, and Silencer Mounting

As production continued on 2025 CX50 JR we found that additional pipe and silencer mounting to the frame helped keep the silencer stinger from rubbing the frame or shock spring.

Customers with early 2025 models without these features may add them at their expense. Cobra will attach the features if the customer sends the frame pipe and silencer to Cobra for welding and paint touch up.

Alternatively, we can send some, or all the bracketry parts, to the customer for the price of shipping to the customer so that the customer could weld on themselves.

CAUTION!
If welding on a frame, make sure to disconnect all electronics!!
