TSB0427 CX65 Bottom Radiator Mounts and Coolant Hose

Engine cradle tubes are getting too close to the bottom tanks of the CX65 radiators. Cobra is going to transition the 2027 frame to a wider bottom radiator mount that will allow the radiators to set further from the frame. This widening of the bottom of the radiators must also correspond with a longer bottom radiator connecting hose.

The part number for the hose kit is FKC60005 (71mm cross tube) which replaces the older hose kit FKC60003 used from 2022 until now.
